PROFESSIONAL SUMMARY

Computer Engineering graduate specializing in AI and Data Science, with hands-on experience building machine learning pipelines, retrieval-augmented generation (RAG) systems, and business intelligence solutions using Python, SQL, and Power BI. Skilled in NLP, vector search, ETL development, and dimensional data modeling across end-to-end AI and analytics projects. Focused on transforming structured and unstructured data into actionable insights and intelligent applications.

TECHNICAL SKILLS

Programming: Python, SQL

Databases: PostgreSQL, Microsoft SQL Server

Business Intelligence: Power BI, Power Query, DAX

Data Analysis: Pandas, NumPy, Matplotlib, Microsoft Excel

Data Modeling & ETL: Semantic Modeling, Star Schema, Dimensional Modeling, ETL, Medallion Architecture

Machine Learning & Statistical Modeling: Scikit-learn, PyTorch, Statsmodels

AI & NLP: Transformers, Sentence-Transformers, Retrieval-Augmented Generation (RAG), Vector Search (ChromaDB), LLM Integration

Version Control: Git, GitHub

EXPERIENCE

Data Science Instructor

Nov. 2025 – Dec. 2025

Arniko College

Biratnagar, Nepal

- Designed and delivered a 30-day Python and data science curriculum covering Pandas, NumPy, Matplotlib, Scikit-learn, and deep learning, mentoring students through hands-on coding exercises and applied projects.

Python & Data Science Instructor

Aug. 2025

Itahari Namuna College

Itahari, Nepal

- Led a 10-day intensive training program for undergraduate students on Python programming, data analysis, data visualization, and machine learning fundamentals.

PROJECTS

Customer Intelligence Platform | Python, PostgreSQL, SQL, Scikit-learn, Statsmodels

GitHub

- Architected an end-to-end customer analytics pipeline on 99K+ orders and 96K+ customer records using PostgreSQL and Python, following the CRISP-DM methodology.
- Engineered behavioral features from 99K+ transactions and applied K-Means clustering to identify 5 distinct customer segments to support targeted marketing and retention analysis.
- Built a SARIMA(1,1,2) time series forecasting model for revenue prediction, validating accuracy with MAE, RMSE, and MAPE.

SQL Data Warehouse Project | SQL Server, T-SQL, ETL

GitHub

- Designed and implemented a SQL Server data warehouse using a Bronze-Silver-Gold Medallion architecture, integrating CRM and ERP source data into analytics-ready star-schema models.
- Developed reusable SQL reporting and exploratory analysis scripts to support downstream business intelligence workflows.

AI Research Paper Analyzer | Python, GROBID, Transformers, ChromaDB, RAG

GitHub

- Developed an AI-powered research paper analysis platform that parses academic PDFs using GROBID and generates structured, section-level summaries across three configurable analysis modes (fast, enhanced, interactive).
- Implemented a retrieval-augmented generation (RAG) pipeline using sentence-transformer embeddings and ChromaDB vector search to power context-grounded, paper-scoped question answering with source attribution.
- Integrated LLM-based response generation with a background job processing system for asynchronous paper analysis and real-time status tracking.

EDUCATION

Tribhuvan University – IOE, Purwanchal Campus

2022 – 2026

Bachelor of Computer Engineering

Dharan, Nepal
